

XM Satellite Radio is one of the best new consumer products in the last 50 years. It's products/services are tailored to its audience, and local weather and traffic is a valuable resource to those of us who live in congested cities, like Washington D.C. Please reject the National Association of Broadcasters ("NAB") petition 04-180 that seeks to stop XM radio from providing such programming. The NAB is just behind the times and is attacking an innovative company that provides a great service.
